Wednesday 04 August 2010

Dear Test Dunning

This is your second reminder that you currently have past due invoices on account with us. The following invoices on your account are past due:

| Invoice Number   | PO Number | Invoice Date | Due Date  | Days Late | Invoice Amount | Balance Due |
|------------------|-----------|--------------|-----------|-----------|----------------|-------------|
| 10123            |           | 01-JUL-10    | 01-JUL-10 | 34        | 110.00         | 110.00      |
| Subtotal:        |           |              |           |           |                | 110.00      |
| Finance Charges: |           |              |           |           |                | 0.00        |

The following examples illustrate overdue and entry dates based on the four possible combinations of configuration options. See "Setting the Minimum Overdue Balance to Process". These dunning letter templates are used in Collections Configuration to set the dunning letters action and the invoice reminders action. This software or hardware is developed for general use in a variety of information management applications. (Scenarios define entry and exit criteria for collections as well as what happens to a bill unit while it is in collections.) For example, bill units in the low-credit-score profile might be updated to scenarios with more aggressive collections actions and lower entry criteria. You need to write code that defines the characteristics of the collections profiles and maps bill units to them. See "Configuring the Overdue Date" for instructions. When pin\_collections process is run and the collections actions is processed again, if an error occurs, then the collections action object is updated to Error. See "Locale Names" in BRM Developer's Guide. Collections Manager notifies the custom client application when a collections activity occurs, such as an account entering collections, by using the event notification system. Table 8-1 describes the parameters in this file: Table 8-1 Elements Used to Store Additional Scenario Parameters Element Description PARAM\_NAME Name of the parameter. Edit the file, which includes examples and instructions. For information about how Collections Manager uses these dates, see "About Overdue and Entry Dates". When you define a new profile, Collections Configuration creates a /config/collections/profile object, which stores definitions of collections profiles. To How it determines the collection manager The date of entry: Open the pin\_collections / pin.conf configuration file (BRM\_HOME / apps / pin\_collections / pin.conf) in a text editor. The custom client application manages the activity of collections, such as the preparation of letters or the application of behind, calling Collections Manager API. To integrate Collections Manager with a custom client application: Page 7 Use this utility to find billing units (/ Billinfo objects) that are in collections and to activate collections actions defined by the collections scenario of the Unit of invoice. To load a Dunning letter template: go to a directory that contains a valid configuration file (pin.conf). For example: - PIN\_COLLEITIONS\_PROCESS\_USE\_CURRENT\_TIME 1 Save and close the file. To enter the name of a field present in a matrix or a substructure, use the format matrix. This date is updated if the expiration date changes. 15 Feb. Str. version version of the chain located within the domain. Collections Manager works all day. For the invoicing units that enter or remain in collections, all the actions defined by the corresponding collection scenario are carried out. Payment received None None 15.00 Amount in Mora 15.00 30.00 45.00 45.00 Date of Mora None Feb. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. after creating your template, grass in the BRM database using the PIN\_LOAD\_TEMPLATE utility. Identify the dunning letters set provided by an application.
